**Derris Johns**  
2014 TCA President

Working enthusiastically, collectively and smartly will help us create a better future for the Tennessee concrete industry as laws and regulations continue to increase. We need all of our TCA member to be proactive... let your voice and opinion be heard.

# BE PROACTIVE

I have a very good friend who I met through TN Concrete Association – one of the many benefits I have received from being a TCA member. He once gave me some very good advice: Always speak and work from the heart.

So speaking from a small producer's heart, be proactive! As citizens and as business people, all of us need to be more involved in our national, state, and local governments. As a nation, we are becoming desensitized to our freedoms and our government is slowly becoming our controller instead of us, as citizens, controlling our government. Regulations and restrictions influence all aspects of our lives and businesses so careful and intense consideration should be given to every decision that impacts our business and personal lives. If we are not present to give our side of the story, regulations and restrictions will be imposed ever more rapidly. We have seen a continuing stream of such restrictions on free enterprise, speech, religion, and more but many of us have not made the effort to communicate our position to those making the decisions.

A current example would be the hours of service rules for short-haul drivers that put extra restrictions on our industry. Please don't misunderstand—I value the safety of all my drivers and we strive to operate safely and responsibly every single day. The current Hours of Service rules were designed primarily with long-haul, or over-the-road drivers in mind and for the most part they make sense in that context. But for many local hauling businesses, not just ready mix

producers, these regulations are helping to fuel a critical shortage of qualified drivers. How many of us have communicated directly with our elected representatives on this issue that is so important to our business?

Working enthusiastically, collectively and smartly will help us create a better future for the Tennessee concrete industry as laws and regulations continue to increase. We need all of our TCA members to be proactive: Attend the TDOT liaison meetings, Day on the Hill, local legislative breakfasts and any other interactions with our government representatives to let your voice and opinion be heard.

My membership in TCA has been the greatest factor to my business remaining successful. TCA has made me aware of regulations new and old and they have helped me bring my business into compliance. I have met other ready mix people facing many of the same challenges that I have and they have shared expertise and experience that made my business better. TCA's associate and affiliate members also have become a great asset to my business and they help me be successful every day.

I used to think I didn't have time to be involved in TCA. The truth is that the time I put into TCA is one of the best investments I can make with my time. I recommend that you make an effort to attend the liaison meetings, go to the TCA campus anytime (but especially when an event is scheduled!) and join us at seminars and conventions. Be proactive!

## Commitment by Lafarge

Lafarge isn't merely a producer of raw materials, but the producer of materials that make up the composition of our lives - where we live, work and play.

We hold dear the safety and development of our employees, satisfaction of our customers, harmony with our communities and respect for the environment.

We use natural resources in innovative ways to help construct the building blocks that are required to enhance, protect and sustain human life.

# Complex Problems... Simple Solutions. REALLY?

**Alan Sparkman**  
Executive Director

TCA is working now on setting up local meeting across the state to encourage our members to get to know their elected representatives at all levels of government. Your presence and your voice at these meetings will determine whether or not they are successful, so please get involved and make sure that the people who represent you hear your side of the story.

**W**elcome to our Annual Membership Directory issue. In addition to our regular content, this issue contains a listing of all of our current Tennessee Concrete Association members, as well as a printed index of individuals certified as ACI Field Testing Technicians Grade One and ACI Flatwork Technicians and Finishers. Keep this edition handy throughout the year for a quick way to locate important information about all things related to concrete and remember you can always find the most current information online at [www.tnconcrete.org](http://www.tnconcrete.org).

As I write this column, our U.S. Congress has finally acted to prop up the Highway Trust Fund yet again. As has become the norm, Congress waited until the very last minute to take action, and the action they took provides only a temporary reprieve to prevent the HTF from completely running out of money. While this most recent action prevents a sudden cessation of our nation's infrastructure construction, it does nothing to provide DOT's across the nation with any kind of certainty that facilitates sound future planning and it leaves a crippling fog of doubt for all the industries that have a large stake in the infrastructure market.

I will freely admit my bias as a member of

an industry for whom infrastructure represents an important market segment. I would submit, however, that my bias does not change the fact that a robust infrastructure is the very foundation on which all commerce and industry is based, and without which no nation can hope to support a dynamic and thriving economy that benefits every person in every community.

The refusal of Congress to act on an issue so fundamental to every American starkly reveals how dysfunctional our political system has become in recent history. Let me preface my diagnosis with a quote that I once heard. It goes something like this:

*For every complex problem we face there is a simple solution.... And it is dead wrong.*

While it is tempting to offer 'simple' solutions they rarely provide a real path to a workable solution, and they more often than not prevent action that would actually address the problem at hand. The simple solution we hear from the right is 'No More Taxes!'—short, simple, extremely popular and even more short-sighted.

We have all heard—and probably even

said—“No business person wants to pay more taxes!” But is that actually the case? In my own personal polling (completely unscientific and informal) I find that a majority of business people connected to infrastructure as a key enabler of their business—folks like ready mix producers, long-haul truckers, contractors, logistics companies, design firms and more—support raising the “gas tax” because they understand the critical importance of building and maintaining great infrastructure. And like it or not, they also understand the complete fallacy of trying to run a business today based on the financial climate that existed in the 1990’s (the last time the federal or the Tennessee gas tax was adjusted). We all might pine for the time when diesel costs under \$1 per gallon, but we don’t make current business decisions using that assumption.

While we will never achieve 100 percent support for raising government taxes (or user fees), I believe it is possible to make a strong, well-reasoned case that will win majority support among the driving public as well as the many businesses that depend upon sound infrastructure for their businesses to survive. To do so, we will have to pull the simple-solution politicians off of their “No New Taxes!” soapbox and demand that they actually do the work of governance instead of perpetually running for re-election.

And lest you say that is impossible, let me point out that one Tennessee Senator, Bob Corker, has already demonstrated the courage to do just that with his recent proposal to raise the fuel tax at the federal level.

TCA is working now on setting up local meeting across the state to encourage our members to get to know their elected representatives at all levels of government. Your presence and your voice at these meetings will determine whether or not they are successful, so please get involved and make sure that the people who represent you hear your side of the story.

# Experimenting with High Volume Fly Ash Concrete in Tennessee

## INTRODUCTION

In March 2005, the Tennessee Concrete Association (TCA) sponsored the initial Tennessee Tech research on High Volume Fly Ash (HVFA) concrete. Subsequently, in 2010, the Tennessee Department of Transportation (TDOT) Division of Materials and Tests Division sponsored a project entitled “Higher Volume Fly Ash (HVFA) Portland Cement Concrete (PCC) for Sustainability and Performance”. The TDOT project concluded in 2012 and the authors would like to thank TCA for sponsoring the initial “seed” project. Further, we would also like to thank TDOT for sponsoring the second project and share some of the results of the TDOT project.

HVFA Concrete uses approximately 50 percent Portland cement (PC) replacement rate with Class C fly ash. Current TDOT allowable PC replacement rate is 25 percent for Class C fly ash. However, 2006 TDOT standard specification section 604.03 currently allows a 50 percent substitution of all supplementary cementing materials (SCM) combined and therefore the research was not without precedent [1]. The higher PC replacement rate greatly increases the use of an industrial byproduct making more efficient use of natural resources. Protecting and preserving the environment is always a desirable goal; however, neither performance nor economy should be sacrificed for environmental concerns. Therefore, even though the literature indicates that higher replacement rates may be viable in some applications, the research team assumed that doubling the current TDOT allowable replacement percentage was a prudent first step.

## TCA SEED PROJECT

The TCA seed project, which began in March 2005, included both a preliminary laboratory evaluation and a field placement at Burgess Falls State Natural Area (near Cookeville, TN). Only the field placement will be discussed herein since the TDOT project laboratory evaluation was much more extensive. TDOT standard specification section 604.03 currently requires a change in chemical admixture types used at 85°F. The concept behind HVFA PCC was to change the supplementary cementing material substitution rate as well as the chemical admixtures at 85°F. The retarding effect of high fly ash substitution might be an effective and more economical answer to hot Tennessee summer days.

Table 1 shows the mixture design used at the Burgess Falls placement compared to a contemporary TDOT Class A mixture design. It is important to note that in the TCA seed project HVFA PCC was assumed to be competing to be a hot weather replacement for TDOT Class A PCC. Later, it was realized that HVFA PCC could move up a weight class (620 vs. 564-lbs/CY) and compete to be a hot weather replacement for TDOT Class D. Figure 1 shows the natural beauty of the big falls at Burgess Falls State Natural

Area (a great place to visit or do concrete research). Figures 2 through 4 show placement of and sample fabrication for the Burgess Falls HVFA PCC slab. Figure 5 shows compressive strength development of HVFA PCC mixture used at Burgess Falls (field cast lab cured). Figure 6 shows a birthday cake for the five-year-old HVFA PCC that the first author’s youngest daughter baked (concrete is extremely important to the Crouch family). Figure 7 shows the 9-year-old HVFA PCC slab serving (as a base for a handicapped accessible historical information kiosk) without a crack (the few edge dings from mowing are not a mixture design problem in the opinion of the first author).

Figure 7: Nine Year Old HVFA PCC Slab without a Crack 4/20/14

## TDOT PROJECT 2010: HVFA AND TDOT CLASS D MIXTURE DESIGNS

Table 2 shows TDOT Class D and HVFA PCC mixture designs for both above and below 85°F that were used in the study. Table 3 shows comparisons of TDOT Class D and HVFA PCC attributes with 2010 TDOT 604.03 Class D requirements.

Material cost is always an important concern; the cost assumptions used for the TDOT HVFA research are shown in Table 4. Applying the cost assumptions in Table 4 to the mixture designs in Table 2 produces the material costs per cubic yard shown in Table 5.

## RESULTS

Table 6 shows the results of plastic property tests on TDOT Class D and HVFA PCC for mixtures above and below 85°F. The research team wanted a fair fight and attempted to produce mixtures with very similar plastic properties. For the mixtures below 85°F, the HVFA PCC has statistically significantly different slump and unit weight from TDOT Class D, but air contents (according to both pressure meter and gravimetric results) are not statistically significantly different. For the mixtures above 85°F, the HVFA PCC has statistically significantly lower slump than TDOT Class D PCC. Other properties measured were not significantly different.

Figure 8 shows a graphical comparison of compressive strength development of HVFA and TDOT Class D PCC. The figure shows that the compressive strength of all mixtures was greater than 750-psi at one day, as recommended for form wrecking without excessive damage [2]. Although HVFA PCC required a chemical accelerator to achieve the compressive strength in the 70°F range, as the temperature increased above 85°F HVFA PCC mixtures no longer required the chemical accelerator, and had no need of a chemical retarder to maintain plasticity for placement and finishing operations. Figure 9 shows a graphical comparison of static modulus of elasticity development of HVFA and TDOT Class D PCC. Durability is the key to a long service life for PCC. Reducing the amount of water absorbed should reduce freeze-thaw damage to PCC mixtures. The Portland Cement Association (PCA) indicates that the upper limit of water absorption after boiling for high performance concrete (HPC) is five percent [3]. Figure 10 shows the development of PCC absorption after boiling over time for HVFA and TDOT Class D PCC as well as the PCA HPC upper limit. Figure 11 shows the mean 91-day rapid chloride permeability of HVFA and TDOT Class D PCC.

**TABLE 3. COMPARISON OF MIXTURE DESIGN ATTRIBUTES AND TDOT CLASS D PCC REQUIREMENTS**

Quantity/Ratio/Percentage	TDOT 604.03 Class D PCC Requirements	TDOT Class D and Class D Hot	HVFA and HVFA Hot

Figure 9: Static Modulus of Elasticity Development of HVFA and TDOT Class D Mixtures

Figure 10: Concrete Absorption Development of HVFA and TDOT Class D Mixtures

## ANALYSIS OF RESULTS

Table 7 shows the relative mean values of properties of HVFA and TDOT Class D PCC. Thus, the numbers shown are a percentage of the mean TDOT Class D PCC results that the mean HVFA PCC results obtained. A cell shaded in blue indicates that at a specified age, TDOT Class D PCC was significantly different and superior to HVFA PCC. A cell shaded in yellow indicates that at a specified age, HVFA PCC was significantly different and superior to TDOT Class D PCC. It is important to note that sometimes “greater” is superior and sometimes “greater” is inferior depending on the property being measured. Table 8 is a similar comparison of hot HVFA and hot TDOT Class D PCC.

## SUMMARY

This was certainly not a close fight (almost a knockout). Going to the judge’s scorecard (Table 9), HVFA PCC is the clear winner. However, the “cooler” mixtures (below 85°F) were cast, cured and tested in the 70s. At lower casting and curing temperatures TDOT Class D would probably have prevailed (due to HVFA requiring more chemical accelerator) in either cost or early age compressive strength. TDOT Class D is therefore much more widely applicable (over a wider range of temperatures) than HVFA PCC at lower temperatures.

The fight was a knockout for HVFA PCC above 85°F. As the mixing, casting and curing temperature rises, hot HVFA PCC’s advantage over hot TDOT Class D PCC would certainly increase. Fortunately, one of the many, many advantages of living in Tennessee is a climate favorable for extensive hot HVFA PCC usage.

**TABLE 6. TDOT CLASS D AND HVFA PLASTIC PROPERTIES AND TDOT CLASS D REQUIREMENTS**

Property	TDOT 604.03 Class D PCC Requirements in 2010	TDOT Class D Mean Value of 10 Batches	HVFA PCC Mean Value of 10 Batches	TDOT Class D Hot Mean Value of 3 Batches	HVFA PCC Hot Mean Value of 3 Batches
Slump after HRWR (inches)	8 maximum	6.9	5.7	6.9	5.3

by L. K. Crouch, Aaron Crowley, Alan Sparkman, Heather P. Hall, and Daniel Badoe

# Experimenting with High Volume Fly Ash Concrete in Tennessee

HVFA PCC can be an effective tool for mixture designers if used correctly. Always use the right tool for the job (never hammer with a crescent wrench – use a hammer). Tennessee summer heat is an excellent time to consider HVFA PCC.

## RECOMMENDATION

Consider using HVFA PCC for summer placements, it has both environmental (higher byproduct usage) and performance advantages (improved durability and compressive strength) when used appropriately. For more information on using HVFA PCC (especially at higher temperatures) contact the Tennessee Concrete Association (TCA) or a local TCA producer member. Go “green” and help improve both the environment and PCC performance simultaneously.

## DISCLAIMER

The opinions expressed herein are those of the authors and not necessarily the opinions of the Federal Highway Administration, the Tennessee Department of Transportation, or the Tennessee Concrete Association.

## ACKNOWLEDGEMENTS

The authors wish to gratefully acknowledge the support of the Tennessee Department of Transportation and the Federal Highway Administration. Special thanks to Gary Head, Jamie Waller and Bill Trolinger.

The authors certainly appreciate the support of the Tennessee Concrete Association. Special thanks to Sarah Egan, Karl Kurzrock, Tim Sparkman and Jerry Woods.

Special thanks to Bill Summers, Park manager of Burgess Falls State Natural Area for allowing us to do research on their site and assisting with slab construction.

We also wish to thank Frank Lennox of Buzzi-Unicem, Denny Lind of BASF, Irving Materials Inc., and Rogers Group, Inc. for their extensive donations of materials to the project.

In addition, the authors would like to thank Jeff Holmes and Perry Melton for their patience and skill in fabrication, maintenance, and repair of the equipment. We would also like to thank Ben Byard, Ryan Hewitt, Wes Mittlesteadt, Tim Dunn, Alan Browning, John Hendrix, Sarah Dillon, Samantha Pittman, Josh Hogancamp, and Jared Thompson for their help in the field and/or laboratory.

Further, we appreciate the support of the Tennessee Technological University Department of Civil and Environmental Engineering.

Finally, the authors appreciate the administrative and information technology support provided by the Tennessee Technological University Center for Energy Systems Research, particularly Tony Greenway, Etter Staggs and Linda Lee.

## AUTHOR INFORMATION

L. K. Crouch, Ph.D., P.E. is a professor of Civil Engineering at Tennessee Technological University.

Aaron Crowley, M.S., E.I. is a civil engineering doctoral student at Tennessee Technological University.

Alan Sparkman, CAE, LEED AP is executive director of the Tennessee Concrete Association.

Heather P. Hall, P.E. is Assistant Engineering Director of Tennessee Department of Transportation Materials and Tests Division.

Daniel Badoe, Ph.D., is a professor of Civil Engineering at Tennessee Technological University.

# Placing Pervious Concrete

Pervious Concrete Allows Rainwater to seep into the ground. It is instrumental in recharging groundwater and reducing storm water runoff.

**Pervious is a Special Mix...  
It Requires Special Tools to Place It**

# DRY BATCH READY MIX OPERATION

*provides 1500 cubic yards of*

## ROLLER COMPACTED CONCRETE PAVEMENT

*for a* New Technical Institute  
*in Kimball, Tennessee*

by: Frank Lennox, CSI, Mgr. Technical Services and Promotion, Buzzi Unicem USA

Roller Compacted Concrete (RCC) was specified as the paving material for the new Marion County Regional Institute of Technical Excellence located in Kimball, TN. Our local RCC paving contractor, Robert Smith, Inc., contacted TCA member, Sequatchie Concrete Services, to provide RCC for this job. The closest Sequatchie plant to this project was 6 miles away and is a dry batch operation. This was not a challenge for the Sequatchie operations staff since they have been providing RCC for most of the RCC projects in the Chattanooga, TN area for over 10 years. Most of their RCC has been produced at their central batch plant in Chattanooga. But, over the years, they have had to produce RCC from some of their smaller dry batch operations. Let me say that over the last 10 years we have learned a lot from trial and error about making RCC out of a dry-batch operation. **But, it can be done. Successfully!**

So how was this dry-batch ready mix plant able to provide 300 cubic yards per day of RCC in four hours and only use

two to three trucks, mostly two trucks per day, as per Jeff Bleil, Operation Manager, Sequatchie Concrete Services.

The process we used is kind of unique, but not new. We used it years ago while providing RCC for a TN DOT access road. Most RCC literature says that a ramp is needed to elevate the ready mix truck higher than the dump truck, such as in *picture number 1*.

We have found that by dumping the RCC onto a concrete paved area (*picture number 2*) and using a front end loader to load the dump trucks (*picture number 3*), is quicker. We try to get 40 to 50 yards of material on the ground before the first dump truck arrives. This is enough material to fill five to six dump trucks. The paving contractor used 6 dump trucks for this job. While the front end loader is at work filling the dump trucks, the ready mix trucks are refilling the RCC pile. You never run out of material. In this type of operation, you always have some time between when the last truck is loaded and the first truck returns for more RCC to be added to the pile. Even though your

pile might get a little low, you have time to build it back up. With the proper mix there is little segregation.

Did we do anything special with our current RCC mix design for this job? The answer is no. We used our standard RCC mix, which Andrew Sons, Quality Control Manager, Sequatchie Concrete Services and I put together, which consist of the following materials: 400 lbs. Type I/II Portland cement, 100 lbs. Type F fly ash, 850 lbs. of # 67 and 850 lbs. of #89 coarse aggregate, 1415 lbs. manufactures sand, 350 lbs. natural sand and 25 gallons water. We also use four oz./cwt of a polycarboxylate admixture. (The admixture is used for workability not water reduction). Since the job was only six miles away and the mean day time temperature was 65°F to 70°F, we did not use a retarder. (We treat RCC just like convention concrete when it comes to hot and cold weather, retarders in hot weather, and accelerators in cold weather.)

### WHY WAS ROLLER COMPACTED CONCRETE USED ON THIS JOB?

During the planning stage of this project, the design build contractor, suggested using Roller Compacted Concrete paving for durability and cost savings. After the contractor took the architect and county officials to see a RCC project placed at our local bus depot, they were sold on RCC. Heidi Hefferlin, of Hefferlin + Kronenberg Architects said that the usage of Roller Compacted Concrete was the right choice.

Roller Compacted Concrete Pavement was a winner for everyone involved. The county got a paving product that will last a long time. The local ready mix producer got 1500 cubic yard job. And a local paving contractor also got work. Without a strong promotion effort, this parking lot and entrance/exit lanes would have been asphalt. I think the real winner here was the NRMCA member, Sequatchie Concrete Services.

The bottom line is that high quality Roller Compacted Concrete can be produced in a standard dry batch ready mix operation!

## LOADING AND DISCHARGE SEQUENCE IS AS FOLLOWS:

- 1** Do Not Use Old Trucks!
  - a. RCC is a product that need to be mixed well
- 2** Check moistures of coarse and fine aggregates before loading procedures begin.
- 3** Make adjustments to the mix design weights accordingly.
- 4** Loading:
  - a. Make sure barrels are empty of wash-out water and returned concrete
  - b. Loading sequence is the same as regular concrete
    - i. 80 percent of design water
    - ii. Admixtures
    - iii. Dry materials
    - iv. Remaining design water  
*(It is very important that all design water, minus moisture adjustments, is added during loading sequence.)*
  - c. Mixing Time: Approximately 1 minute per cubic yard of material. This time may vary depending on truck.
  - d. It is important that Roller Compacted Concrete is mixed well.
- 5** Quantity of load: five to six cubic yards per truck is all a 10 yard capacity truck can handle. Because of the dryness of RCC, if more than this quantity is put into a truck, the material will not mix well and discharging will take longer.
- 6** Wash out rack: Light washing of rear blades and hopper. Care should be taken to not get any water into the RCC mix.
- 7** RCC moisture check: A small amount should be discharged onto the ground and checked for moisture percent by using a hand held moisture meter. This should be done by your quality control person not the truck driver. (Moisture content of RCC is very important. Too dry or wet is not acceptable.)
- 8** Pull to unloading site and start unloading. Moisture should be checked when truck is half unloaded by the same means as in #7. Moisture adjustments can be made if needed.

## TCA Services & STAFF

The Tennessee Concrete Association (TCA) was founded in 1986 to promote the increased use of ready mixed concrete in Tennessee. Our mission statement is: "The TCA is the unified voice for the concrete industry to improve our image and awareness through advocacy, promotion and education that support our members, our community, and our future." We work to fulfill this mission in all of our activities. We invite you to join us in building a concrete industry we can all be proud of.

Supported primarily by membership dues, the association is governed by a 15 member board of directors elected annually by members. The board includes 10 ready mixed producer members who direct local promotional programs in each of our three regions.

## 2014 TCA PROGRAMS

### Promotion

**Annual Convention** – This event brings all members together to celebrate the year's accomplishments.

**Concrete Conference** – Held each year to update architects & engineers on current concrete practices.

**Tennessee Concrete Magazine** – Published 3-4 times annually.

**Membership Directory** – Published annually with information advertising your company.

**E-Newsletter** – To keep you informed of Association programs, industry activities and promotional events.

**Concrete Excellence Awards** – Design Construction and Environmental awards.

**Product Demonstrations** – Decorative, Pervious, Insulated Concrete Forms, Ultra-thin Whitetopping, & Flowable Fill.

**Literature Development** – Statewide High School Concrete Essay Contest.

**Product Promotion Kits** – Kits available for sales helps.

### Trade & Home Show Displays

**TCA Website** – [www.tnconcrete.org](http://www.tnconcrete.org) and the Intranet for up-to-the minute calendar events.

**Video & Technical/Promotional Literature Library** – Maintained as a members resource.

### Training and Certification

- ACI Field Testing Technician, Grade 1
- ACI Flatwork Finisher & Technician
- ACI Concrete Laboratory Testing Technician Grade 1 & 2
- ACI Concrete Construction Special Inspector
- ACI Concrete Strength Testing Technician
- NRMCA Certified Driver Training
- NRMCA Certified Concrete Production Technologist
- NRMCA Pervious Installer Certification
- NRMCA Certified Concrete Sales Professional

## Roller Compacted Concrete

For heavy traffic and large rolling equipment

More durable than asphalt, high compressive strengths

Take a look at our case studies and how *imix*<sup>®</sup> Roller Pave was used at a distillery warehouse in Lynchburg, TN  
[www.irvmat.com/CaseStudies.asp](http://www.irvmat.com/CaseStudies.asp)

Placed with a paver, not forms, and roller compacted.

- Minimal down time
- Maximum strength

*imix*<sup>®</sup> Roller Pave's high density and low absorption allows very little moisture to penetrate the surface, greatly reducing the possibility of potholes due to freeze/thaw cycles.

2617 Grandview Avenue  
Nashville, TN 37211

For more information on *imix*<sup>®</sup> Roller Pave, or to talk to one of our Tennessee representatives, contact us **615-884-4935**

# CIM UPDATE

by Dr. Heather J. Brown

**CIM** students recently went to England for a joint internship with students from sister schools New Jersey Institute of Technology and The University of California, Chico. Students were invited to Constructionarium in Bircham Newton, England (<http://www.constructionarium.co.uk/>). Constructionarium was established at England's Construction College more than a decade ago and its purpose is to link academic knowledge with real world application

through training with construction professionals. Contractors mentor students through the construction processes on scaled down versions of bridges, buildings, and other civil engineering projects found throughout the world.

Students were given the task of completing Ravenspurn North. Ravenspurn North is a North Sea gravity oil platform off the Humber estuary. Designed by Ove Arup, it was built on Teeside at Graythorp for BP. It was the platform that established the viability of concrete gravity structures and showed a different way forward from the US approach. The student version was a four meter by four meter concrete caisson with a steel scaffold superstructure and plywood platform. Students built the entire structure in a dry dock and then floated finished product into position in the deep lake. Throughout the process, students worked as sub-contractors for the general contractor and owner. At the end of each day, the sub-contractor teams were assessed on project management, skilled processes, and budgetary goals.

This trip allowed students to perform in leadership roles that they may find themselves in during their career. MTSU students Hayden Bilyeu served as the Construction Manager, Cole Durio lead the Steel Erection, Roger Insyxiengmay worked as the Lead Surveyor, Kendell Kernick guided Power Tool Operations, and Joseph Lambert served as a Concrete Contractor. Mr. Jon Huddleston, CIM Lab Manager, served as chaperone. This was the first team of USA schools to participate in Constructionarium.
